

COP Assignment 1

Q1 - Hello World First Java Program.

Ans - `package` day1;

```
public class Welcome {  
    public static void main(String[] args) {  
        System.out.println("Hello World Welcome to java");  
    }  
}
```

Output -

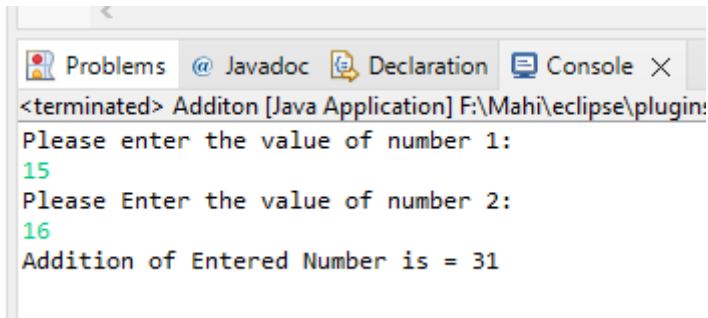

Q2 – Addition of Two Number in java.

Ans - `package` day1;

```
import java.util.Scanner;
```

```
public class Additon {  
    public static void main(String[] args) {  
        Scanner input=new Scanner(System.in);  
        System.out.println("Please enter the value of number 1:");  
        int num1 = input.nextInt();  
        System.out.println("Please Enter the value of number 2:");  
        int num2 = input.nextInt();  
        int ans= num1+num2;  
        System.out.println("Addition of Entered Number is = "+ ans);  
        input.close();  
    }  
}
```

Output -

Q3 – Swap two number in java.

Ans - `package` day1;

```
import java.util.Scanner;
```

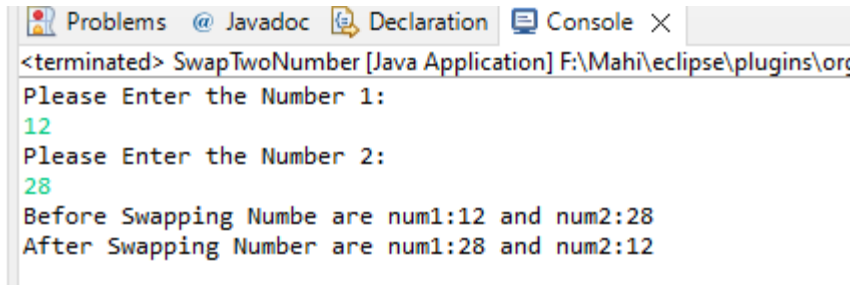

```
public class SwapTwoNumber {  
    public static void main(String[] args) {  
        Scanner in=new Scanner(System.in);
```

```

        System.out.println("Please Enter the Number 1:");
        int num1=in.nextInt();
        System.out.println("Please Enter the Number 2:");
        int num2 =in.nextInt();
        System.out.println("Before Swapping Numbe are num1:"+num1+ " and num2:"+num2);
        num1=num1+num2;
        num2=num1-num2;
        num1=num1-num2;
        System.out.println("After Swapping Number are num1:"+num1+ " and num2:"+num2);
        in.close();
    }
}

```

OutPut -

```

<terminated> SwapTwoNumber [Java Application] F:\Mahi\eclipse\plugins\org.
Please Enter the Number 1:
12
Please Enter the Number 2:
28
Before Swapping Numbe are num1:12 and num2:28
After Swapping Number are num1:28 and num2:12

```

Q4 – check even or odd in java.

Ans - **package** day1;

```

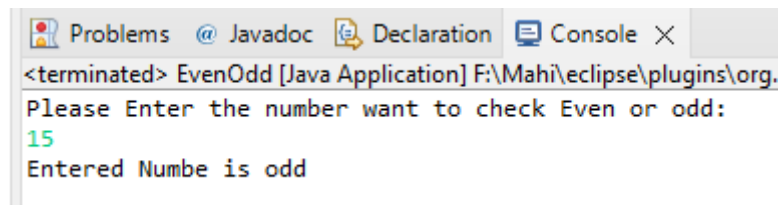

import java.util.Scanner;

public class EvenOdd {

    public static void main(String[] args) {
        System.out.println("Please Enter the number want to check Even or odd:");
        Scanner in = new Scanner(System.in);
        int num = in.nextInt();
        if (num % 2 == 0) {
            System.out.println("Entered Number is Even");
        } else
            System.out.println("Entered Numbe is odd");
        in.close();
    }
}

```

Output -

```

<terminated> EvenOdd [Java Application] F:\Mahi\eclipse\plugins\org.
Please Enter the number want to check Even or odd:
15
Entered Numbe is odd

```

Q5 – Divisible by 5 and 7 in java.

Ans - **package** day1;

```

import java.util.Scanner;

public class Divisibilityby5and7 {

    public static void main(String[] args) {

```

```

Scanner in = new Scanner(System.in);
System.out.println("Enter the number to check divisible or not by 5 and 7 :");
int num = in.nextInt();
if (num % 5 == 0 && num % 7 == 0) {
    System.out.println("Entered number is divisible by 5 and 7 both");
} else
    System.out.println("Entered number is not divisible by 5 and 7");
in.close();
}
}

```

Output

```

<terminated> Divisibilityby5and7 [Java Application] F:\Mahi\eclipse\plugins\
Enter the number to check divisible or not by 5 and 7 :
15
Entered number is not divisible by 5 and 7

```

Q6 – Calculate Income tax using basic salary.

Ans - package day1;

```

import java.util.Scanner;

public class SalaryOfEmployee {

    public static void main(String[] args) {
        Scanner in = new Scanner(System.in);
        System.out.println("Please Enter the basic salary of employee:");
        int basicSalary=in.nextInt();
        int netSalary=0;
        if(basicSalary<150000) {
            netSalary=basicSalary+0;
        }
        else if(basicSalary > 150000 && basicSalary < 300000) {
            netSalary=(int) (basicSalary-0.2*basicSalary);
        }
        else
            netSalary=(int) (basicSalary-basicSalary*0.3);
        System.out.println("Net Salary of Employee is :"+ netSalary);
        in.close();
    }
}

```

Output -

```

<terminated> SalaryOfEmployee [Java Application] F:\Mahi\eclipse\pli
Please Enter the basic salary of employee:
175000
Net Salary of Employee is :140000

```

Q7 – Check vowel or not Character from user.

Ans - package day1;

```
import java.util.Scanner;
```

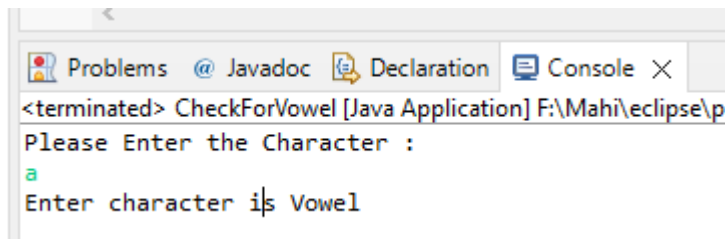

```

public class CheckForVowel {

    public static void main(String[] args) {
        Scanner in = new Scanner(System.in);
        System.out.println("Please Enter the Character :");
        char ch = in.next().charAt(0);
        switch(ch) {
            case 'a':
            case 'e':
            case 'i':
            case 'o':
            case 'u':
            case 'A':
            case 'E':
            case 'I':
            case 'O':
            case 'U':
                System.out.println("Enter character is Vowel");
                break;
            default:
                System.out.println("Enter character is consonant");
        }
        in.close();
    }
}

```

Output -

```

<terminated> CheckForVowel [Java Application] F:\Mahi\eclipse\p
Please Enter the Character :
a
Enter character is Vowel

```

Q8 – Angle is valid or not.

Ans - package day1;

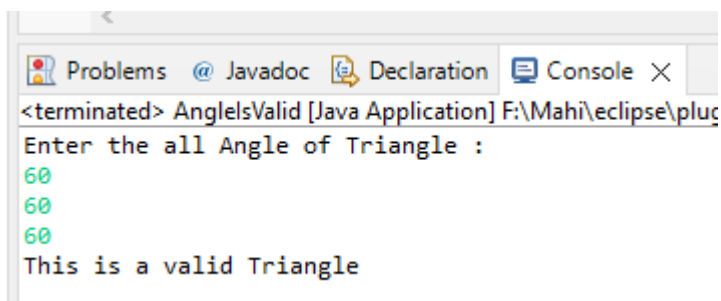

```

import java.util.Scanner;

public class AngleIsValid {
    public static void main(String[] args) {
        Scanner in = new Scanner(System.in);
        System.out.println("Enter the all Angle of Triangle :");
        int a1 = in.nextInt();
        int a2 = in.nextInt();
        int a3 = in.nextInt();
        int angle = a1 + a2 + a3;
        if (angle == 180) {
            System.out.println("This is a valid Triangle");
        } else
            System.out.println("This is not valid Triangle");
        in.close();
    }
}

```

Output -

```

<terminated> AnglesValid [Java Application] F:\Mahi\eclipse\pluc
Enter the all Angle of Triangle :
60
60
60
This is a valid Triangle

```

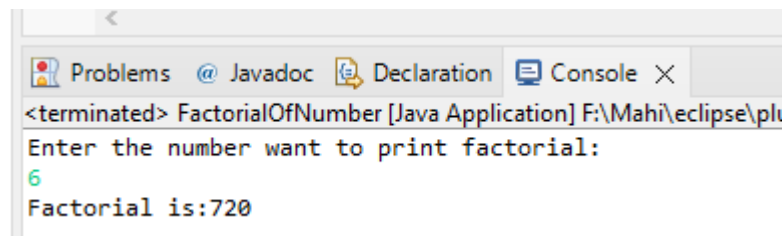

Q9 – Factorial of Input number from user.

Ans - `package` day1;

`import` java.util.Scanner;

```
public class FactorialOfNumber {  
    public static void main(String[] args) {  
        Scanner in = new Scanner(System.in);  
        System.out.println("Enter the number want to print factorial:");  
        int num = in.nextInt();  
        int fact = 1;  
        for (int i = 1; i < num; i++) {  
            fact = fact + fact * i;  
        }  
        System.out.println("Factorial is:"+fact);  
        in.close();  
    }  
}
```

Output

```
<terminated> FactorialOfNumber [Java Application] F:\Mahi\eclipse\pl  
Enter the number want to print factorial:  
6  
Factorial is:720
```

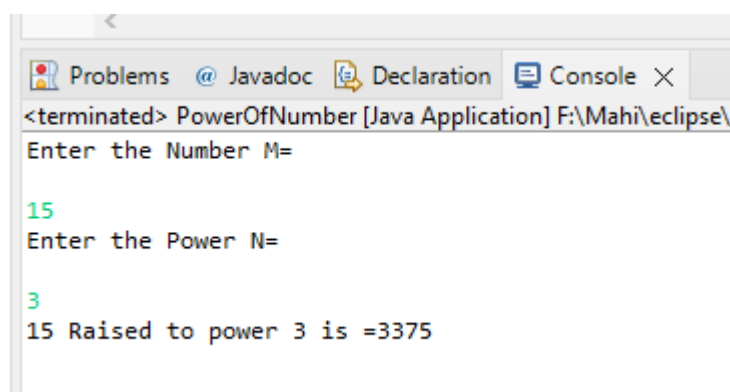

Q10 - Power m raise to n from user.

Ans - `package` day1;

`import` java.util.Scanner;

```
public class PowerOfNumber {  
    public static void main(String[] args) {  
        Scanner in = new Scanner(System.in);  
        System.out.println("Enter the Number M=\n");  
        int num = in.nextInt();  
        System.out.println("Enter the Power N=\n");  
        int n = in.nextInt();  
        int power = 1;  
        for (int i = 0; i < n; i++) {  
            power =power*num;  
        }  
        System.out.println(num + " Raised to power " + n + " is =" + power);  
        in.close();  
    }  
}
```

Output –

```
<terminated> PowerOfNumber [Java Application] F:\Mahi\eclipse\  
Enter the Number M=  
15  
Enter the Power N=  
3  
15 Raised to power 3 is =3375
```

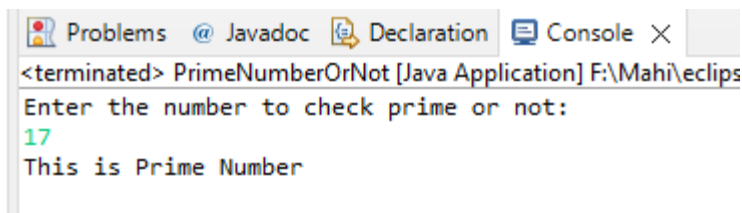

Q11 – Check Number prime or not.

Ans - **package** day1;

import java.util.Scanner;

```
public class PrimeNumberOrNot {  
  
    public static void main(String[] args) {  
        Scanner in= new Scanner(System.in);  
        System.out.println("Enter the number to check prime or not:");  
        int num=in.nextInt();  
        int count=0;  
        for(int i=1;i<=num;i++) {  
            if(num%i==0) {  
                count++;  
            }  
        }  
        if(count==2) {  
            System.out.println("This is Prime Number ");  
        }  
        else  
        {  
            System.out.println("This is not Prime Number ");  
        }  
        in.close();  
    }  
}
```

Output -

The screenshot shows the Eclipse IDE's console window. The title bar includes 'Problems', 'Javadoc', 'Declaration', and 'Console'. The console output is as follows:
<terminated> PrimeNumberOrNot [Java Application] F:\Mahi\eclips
Enter the number to check prime or not:
17
This is Prime Number

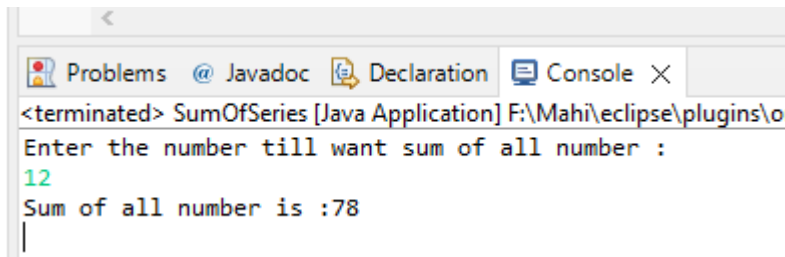

Q12 – Sum of series 1+2+3.....n

Ans - **package** day1;

import java.util.Scanner;

```
public class SumOfSeries {  
  
    public static void main(String[] args) {  
        Scanner in= new Scanner(System.in);  
        System.out.println("Enter the number till want sum of all number :");  
        int num=in.nextInt();  
        int ans =0;  
        for(int i=0;i<=num;i++) {  
            ans+=i;  
        }  
        System.out.println("Sum of all number is :"+ans);  
        in.close();  
    }  
}
```

Output –

```
<terminated> SumOfSeries [Java Application] F:\Mahi\eclipse\plugins\o
Enter the number till want sum of all number :
12
Sum of all number is :78
```

Q13 – Palindrome or not.

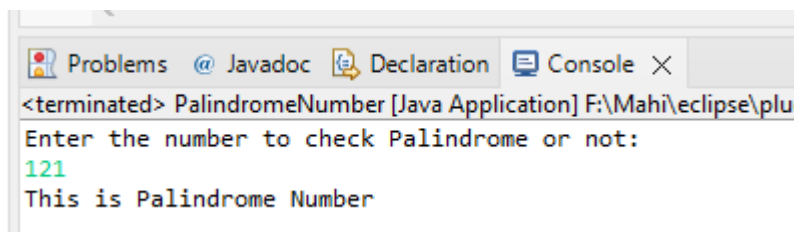

Ans - **package** day1;

import java.util.Scanner;

public class PalindromeNumber {

```
    public static void main(String[] args) {
        Scanner in = new Scanner(System.in);
        System.out.println("Enter the number to check Palindrome or not:");
        int num = in.nextInt();
        int original = num;
        int rev = 0, rem;
        while (num != 0) {
            rem = num % 10;
            rev = rev * 10 + rem;
            num = num / 10;
        }
        if (rev == original) {
            System.out.println("This is Palindrome Number");
        } else {
            System.out.println("This is not Palindrome");
            in.close();
        }
    }
}
```

Output -

```
<terminated> PalindromeNumber [Java Application] F:\Mahi\eclipse\plu
Enter the number to check Palindrome or not:
121
This is Palindrome Number
```

Q14 – Sum of Odd and Even up to n.

Ans - **package** day1;

import java.util.Scanner;

public class SumOfEvenAndOddNumber {

```
    public static void main(String[] args) {
        Scanner in = new Scanner(System.in);
        System.out.println("Enter the Number for sum of all even and odd:");
        int num = in.nextInt();
        int sumofeven = 0;
```

```

    int sumofodd = 0;
    for (int i = 1; i <= num; i++) {
        if (num % i == 0) {
            sumofeven = sumofeven + i;
        } else {
            sumofodd += i;
        }
    }
    System.out.println("The sum of all Even number :" + sumofeven);
    System.out.println("The sum of all odd number :" + sumofodd);
    in.close();
}
}

```

Output -

```

Problems  @ Javadoc  Declaration  Console X
<terminated> SumOfEvenAndOddNumber [Java Application] F:\Mahi\ eclipse

12
The sum of all Even number :28
The sum of all odd number :50

```

Q15 - Reverse of number.

Ans - `package day1;`

`import java.util.Scanner;`

```

public class ReverseOfNumber {

    public static void main(String[] args) {
        Scanner in = new Scanner(System.in);
        System.out.println("Enter the number for Reverse of Number :");
        int num = in.nextInt();
        int rem, rev = 0;
        while (num > 0) {
            rem = num % 10;
            rev = rev * 10 + rem;
            num = num / 10;
        }
        System.out.println("Reverse of given number is :" + rev);
        in.close();
    }
}

```

Output -

```

Q16 - Printing all prime Number up to n.

Ans - `package day1;`

`import java.util.Scanner;`

```

public class PrimeNunerUptoN {
    public static void main(String[] args) {
        Scanner in = new Scanner(System.in);
        System.out.println("Enter the number to print all prime number:");
        int maxNumber = in.nextInt();
    }
}

```

```

for (int num = 2; num <= maxNumber; num++) {
    boolean isPrime = true;
    for (int i = 2; i <= num / 2; i++) {
        if (num % i == 0) {
            isPrime = false;
            break;
        }
    }
    if (isPrime == true)
        System.out.println(num);
    in.close();
}
}
}

```

Output -

```

Problems  @ Javadoc  Declaration  Console X

COP Assignment 2

Q1 - Java program to print the following pattern on the console

Ans - `package day2and3;`

```
public class Pattern {  
    public static void main(String[] args) {  
        for (int i = 0; i < 5; i++) {  
            for (int j = 0; j <= i; j++) {  
                System.out.print(" *");  
            }  
            System.out.println();  
        }  
    }  
}
```

Output -

Q2 - Write a program which will accept student information like rollno,name,5 subject marks.calculate total and percentage.calculate grade.per>75 grade :A per<74and>60 :B per<59 :C

Ans - `package day2and3;`

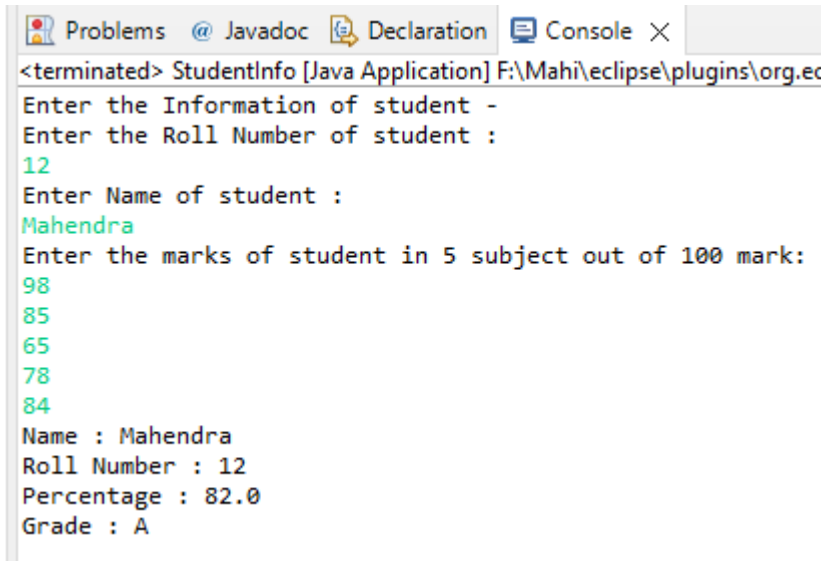

```
import java.util.Scanner;  
  
public class StudentInfo {  
    public static void main(String[] args) {  
        Scanner in=new Scanner(System.in);  
        System.out.println("Enter the Information of student - ");  
        System.out.println("Enter the Roll Number of student : ");  
        int rollNo=in.nextInt();  
        System.out.println("Enter Name of student :");  
        String name= in.next();  
        System.out.println("Enter the marks of student in 5 subject out of 100 mark:");  
        int m1=in.nextInt();  
        int m2=in.nextInt();  
        int m3=in.nextInt();  
        int m4=in.nextInt();  
        int m5=in.nextInt();  
        int total=m1+m2+m3+m4+m5;  
        float perc=total/5;  
        if(perc>75) {  
            System.out.println("Name : "+ name + "\nRoll Number : "+rollNo);  
            System.out.println("Percentage : " +perc +"\nGrade : A");  
        }  
        else if(perc>60&&perc<74) {  
            System.out.println("Name : "+name + "\nRoll Number : "+rollNo);  
            System.out.println("Percentage : " +perc +"\nGrade : B" );  
        }else {  
            System.out.println("Name : "+name+ "\nRoll Number : "+rollNo);  
        }  
    }  
}
```

```

        System.out.println("Percentage :"+perc + "Grade : c");
        in.close();
    }
}

```

Output -

```

<terminated> StudentInfo [Java Application] F:\Mahi\eclipse\plugins\org.ec
Enter the Information of student -
Enter the Roll Number of student :
12
Enter Name of student :
Mahendra
Enter the marks of student in 5 subject out of 100 mark:
98
85
65
78
84
Name : Mahendra
Roll Number : 12
Percentage : 82.0
Grade : A

```

Q3 - Write a Java program to find the maximum and minimum value of an array.

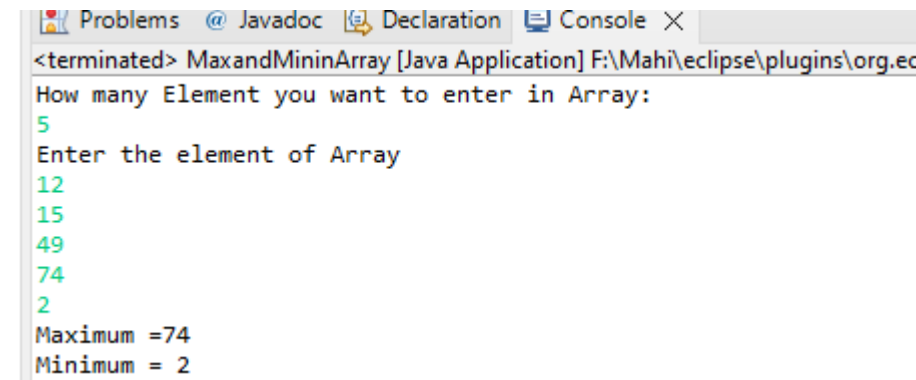

```

Ans - package day2and3;
import java.util.Scanner;
public class MaxandMininArray {

    public static void main(String[] args) {
        Scanner in = new Scanner(System.in);
        System.out.println("How many Element you want to enter in Array: ");
        int No = in.nextInt();
        int[] arr = new int[No];
        System.out.println("Enter the element of Array");
        for (int i = 0; i < No; i++) {
            arr[i] = in.nextInt();
        }
        int max = arr[0], min = arr[0];
        for (int i = 0; i < No; i++) {
            if (max < arr[i]) {
                max = arr[i];
            }
            if (min > arr[i]) {
                min = arr[i];
            }
        }
        System.out.println("Maximum = " + max + "\nMinimum = " + min);
        in.close();
    }
}

```

Output -

```

Q2 - Create a class Person with data members as name, age, city. Write getters and setters for all the data members. Also add the display function. Create Default and Parameterized constructors. Create the object of this class in main method and invoke all the methods in that class.

Ans - `package` day4and5and6;

```
public class Person {  
    private String name;  
    private int age;  
    private String city;  
  
    public Person() {  
        name="Ram";  
        age=21;  
        city="Pune";  
    }  
    public Person(String name,int age , String city) {  
        this.name=name;  
        this.age=age;  
        this.city=city;  
    }  
    public void display() {  
        System.out.println("Name: "+name+"\nAge: "+age+"\nCity: "+city);  
    }  
}
```

```

    }
    public void setter(String name ,int age,String city) {
        this.name=name;
        this.age=age;
        this.city=city;
    }
    public String getName() {
        return name;
    }
    public int getAge() {
        return age;
    }
    public String getCity() {
        return city;
    }
}

```

```

package day4and5and6;
public class TestPerson {

    public static void main(String[] args) {
        Person P1 = new Person();
        P1.display();

Q3 - Create a class Date with data members as dd, mm, yy. Write getters and setters for all the data members. Also add the display function. Create Default and Parameterized constructors. Create the object of this class in main method and invoke all the methods in that class.

Ans – `package day4and5and6;`
`public class Date {`
 `private int dd;`
 `private int mm;`
 `private int yy;`

 `public Date()`
 `{`
 `dd=31;`
 `mm=12;`
 `yy=96;`
 `}`

```

public Date(int dd,int mm,int yy)
{
    this.dd=dd;
    this.mm=mm;
    this.yy=yy;
}

public void display()
{
    System.out.println("Day="+dd + " Month =" +mm+" year= 19"+yy);
}

public void setter(int dd,int mm,int yy)
{
    this.dd=dd;
    this.mm=mm;
    this.yy=yy;
}

public int getDay()
{
    return dd;
}
public int getMonth()
{
    return mm;
}

public int getYear()
{
    return yy;
}
}

```

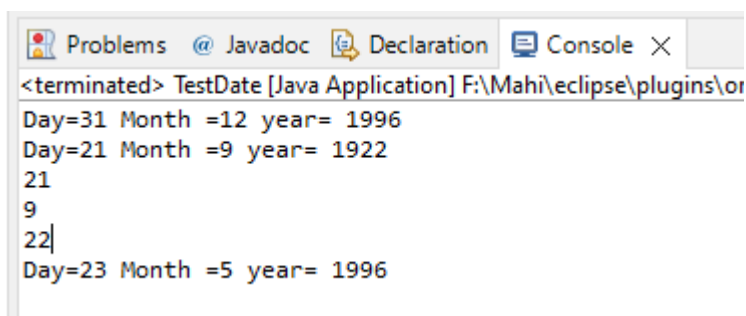

```

package day4and5and6;
public class TestDate {

    public static void main(String[] args) {
        Date d1= new Date();
        d1.display();
        Date d2=new Date(21,9,22);
        d2.display();
        int day=d2.getDay();
        System.out.println(day);
        int month=d2.getMonth();
        System.out.println(month);
        int year=d2.getYear();
        System.out.println(year);
        Date d3= new Date();
        d3.setter(23, 05, 96);
        d3.display();
    }
}

```

Output -

```

COP Assignment 4

Q1 - Create Date class with members day, month, year. Write no argument and parameterised constructor. Create two object s and initialize them using no argument and parameterised constructor respectively. Print date using display function.

Ans - `package day7;`

```
public class Date {
    private int dd;
    private int mm;
    private int yy;

    public Date() {

    }

    public Date(int dd, int mm, int yy) {
        this.dd = dd;
        this.mm = mm;
        this.yy = yy;
    }

    public void display() {
        System.out.println("Date:" + dd + "-" + mm + "-" + yy);
    }

    public void acceptInfo(int d, int m, int y) {
        this.dd = d;
        this.mm = m;
        this.yy = y;
    }
}
```

```
package day7;
public class DateTest {
    public static void main(String[] args) {
        Date D1 = new Date();
        D1.display();

        Date D2 = new Date(23, 05, 1996);
        D2.display();
    }
}
```

Output -

Q2 - Create Employee class with members id(int),name(string),dob(Date).Use above created Date class. Write default and parameterised constructor in Employee Class.Write accept() function to accept information and display() to display emp information.

Ans - `package day7;`

```
import java.util.Scanner;
public class Employee {
    private int id;
    private String name;
```

```

Date d = new Date();
Scanner sc = new Scanner(System.in);

public Employee() {

}

public Employee(int id, String name, int dd, int mm, int yy) {
    this.id = id;
    this.name = name;
}

public void acceptInfo(int id, String name) {
    System.out.println("Enter Date of Birth of Emp");
    int dd = sc.nextInt();
    int mm = sc.nextInt();
    int yy = sc.nextInt();
    d.acceptInfo(dd, mm, yy);
    this.name = name;
    this.id = id;
}

public void display() {
    System.out.println("ID : " + id + "\nName : " + name);
    d.display();
}
}

package day7;
import java.util.Scanner;
public class EmployeeTest {
    public static void main(String[] args) {
        Scanner in = new Scanner(System.in);
        // Employee E1 = new Employee();// Default
        Employee E2 = new Employee();// Parameterised
        System.out.println("Enter ID And name ");
        int id = in.nextInt();
        String name = in.next();
        E2.acceptInfo(id, name);
        E2.display();
        in.close();
    }
}

```

Output -

```

<terminated> EmployeeTest [Java Application] F:\Mahi\eclipse\plu

Date:23-5-96

```

Q3 - Consider that payroll software needs to be developed for computerization of operations of an ABC organization. The organization has employees.
 3.1. Construct a class Employee with following members using private access specifies:
 3.2. Write methods to display the details of an employee and calculate the gross

Ans - package day7;

```

public class Payroll {
    private int empId;
    private String empName;
    private double baseSal;
    private double hra;

```

```

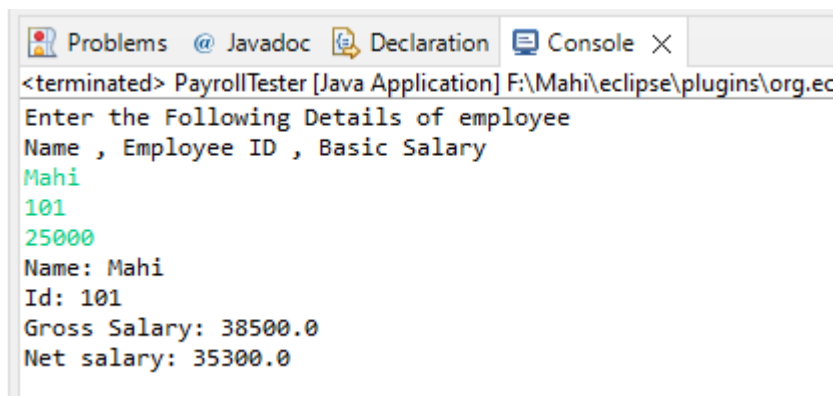

private int Medical;
private double pf;
private double pt = 200;
private double grosSal;
private double netSal;
public Payroll() {
}
public Payroll(String empName, int empId, double baseSal) {
    this.empId = empId;
    this.empName = empName;
    this.baseSal = baseSal;
}
public void display() {
    hra = 0.5 * baseSal;
    Medical = 1000;
    pf = 0.12 * baseSal;
    pt = 200;
    grosSal = (baseSal + hra + Medical);
    netSal = (grosSal - (pt + pf));
    System.out.println(
        "Name: " + empName + "\nId: " + empId + "\nGross Salary: " + grosSal
+ "\nNet salary: " + netSal);
}
}

package day7;
import java.util.Scanner;
public class PayrollTester {

    public static void main(String[] args) {
        Scanner in = new Scanner(System.in);
        System.out.println("Enter the Following Details of employee");
        System.out.println("Name , Employee ID , Basic Salary");
        String name = in.next();
        int id = in.nextInt();
        double salary = in.nextDouble();
        Payroll E1 = new Payroll(name, id, salary);
        E1.display();
        in.close();
    }
}

```

Output -

```
